Amendments to the Abstract:

Please replace the Abstract with the following amended Abstract:

~~The invention relates, in case that a thermally tempered glass is produced by allowing an impact jet flow from quenching nozzles to blow against the glass, to a~~ A process for producing a curved shape, thermally tempered glass, ~~characterized in that a~~ comprises the step of quenching a glass by allowing an impact jet flow that is an underexpansion jet flow to blow against the glass, ~~is conducted by~~ simultaneously ~~using~~ from at least two types of quenching nozzles having different exit diameters ~~of the quenching nozzles~~. Furthermore, the invention relates to a curved, thermally tempered glass produced by this process and to an apparatus for producing the thermally tempered glass. ~~In the invention, it~~ It is preferable that [[a]] an exit diameter d is from ϕ1 mm to ϕ8 mm, a distance Z between the nozzle and the glass is 1 to 80 mm, a chamber pressure P is in a range of 0.1 to 0.8 MPa, and a heat flux difference is 150 kW/m^2 or less. Furthermore, in the thermally tempered glass, it is preferable that a difference of surface compressive stress values within a glass surface is 20 MPa or less.
